

VAIBHAV LAKHICHAND CHAUDHARI

Software Engineer | +91 7414933040 | vaibhavic3040@gmail.com | GitHub | LinkedIn

SUMMARY

Computer Science graduate (CGPA: 9.18) with over a year of relevant experience in the development, maintenance, and optimization of full-stack software solutions. Applies scientific methods to analyse and solve software engineering problems across research, design, development, and maintenance. Consistently delivers accurate and reliable results with minimal supervision across a range of tasks and problems. Actively builds software engineering skills and expertise aligned with professional community standards. Collaborates effectively as a team player with engineers and stakeholders, making decisions based on situational understanding to drive direct and positive impact on project performance.

EDUCATION

Bachelor of Engineering in Computer Science Atharva College of Engineering, Mumbai, India	May 2024 CGPA: 9.18 / 10.00
Higher Secondary Certificate (H.S.C.) Indirabai Lalwani Jr. College, Jamner, India	Jun 2020 Percentage: 74.14%
Secondary School Certificate (S.S.C.) Vikas Madhyamik Vidyalaya, Raver, India	Jun 2018 Percentage: 88.00%

SKILLS

Programming	Java, C++, OOP, Data Structures & Algorithms, C
Web Technologies	ReactJS, HTML5, CSS3, JavaScript, NodeJS, ExpressJS, REST APIs
Databases	SQL, MySQL, MongoDB
Software Engineering	SDLC, Software Design Principles, Research & Design, Application Lifecycle Management
Config & Release	Git, GitHub, Version Control, Branch Management, CI/CD Workflows, Configuration Management
Collaboration	Agile/Scrum, Cross-functional Teamwork, Peer Code Review, Technical Documentation
Soft Skills	Analytical Thinking, Problem-Solving, Independent Delivery, Verbal & Written Communication

PROJECTS

AgriConnect MERN Stack <i>Academic Project</i>	Semester VII
--	--------------

- Applied scientific methods to research, design, and deploy a full-stack platform enabling direct farmer-buyer interaction for 50+ test users; independently managed the complete software development lifecycle from requirements analysis to production release with minimal supervision.
- Validated 20+ REST API endpoints using Postman; designed manual test cases and test documentation, reducing deployment bugs by 30% through systematic analysis — demonstrating ability to work on a range of problems and produce reliable results.
- Maintained codebase using **Git** and **GitHub**; organised own work across structured branching and version control practices to support collaborative development and deliver against defined milestones.
- Technologies: ReactJS, NodeJS, ExpressJS, MongoDB, REST APIs, Git

DSA Visualizer Java <i>Personal Project</i>

- Exercised original thought and judgement in the research and design of an interactive desktop application visualizing 10+ sorting, searching, and graph traversal algorithms using Java Swing; delivered the solution end-to-end with minimal direction.
- Applied **OOP** principles, software design patterns, and modular architecture to reduce code duplication by 40% and improve long-term maintainability; automated build and run scripts to streamline the release process.
- Technologies: Java, Java Swing, OOP, Data Structures & Algorithms

PUBLICATION

AGRICONNECT – Bridging Farmers and Markets with Smart Agriculture Solutions

ICSTEMSD International Conference 2024 (2nd Edition)

Status: Submitted

PROFESSIONAL EXPERIENCE

Frontend Developer Intern

Jun 2023 – Aug 2023

Bharat Intern

- Built and configured responsive ReactJS interfaces; applied software engineering best practices including structured **Git** branching, version control, and peer code review — demonstrating solid understanding of software development principles.
- Collaborated within **Agile sprint cycles** as an active team player with engineers and stakeholders, consistently meeting release timelines and quality benchmarks with a direct and positive impact on project performance.
- Applied **JavaScript** scripting to analyse and resolve UI inefficiencies with minimal supervision, reducing design-to-code time by 25%; independently identified and resolved 10+ UI inconsistencies by making decisions based on situational understanding.

Microsoft Dynamics 365 & Power Apps Trainee

Sep 2023 – Oct 2023

ProMX

- Configured and customized Dynamics 365 Sales and Customer Service modules to meet client business requirements, completing 3 end-to-end **configuration workflows** within a 2-week onboarding period; exercised original thought and judgement to independently resolve ambiguous requirements.
- Developed Power Apps solutions to design and automate 5+ business workflows, applying software engineering knowledge and practice to support **application lifecycle management** and reduce manual data entry by 40%.
- Collaborated co-operatively with cross-functional stakeholders to integrate automated flows with enterprise systems, managing **configuration changes** and improving process efficiency by 30% — with measurable positive impact on project performance.
- Documented application requirements and configuration specifications to support cross-functional team alignment, release planning, and knowledge transfer — enabling other engineers to work effectively against mid-term delivery goals.
